

Remediate What Really Matters

# With **CYBOT PRO**

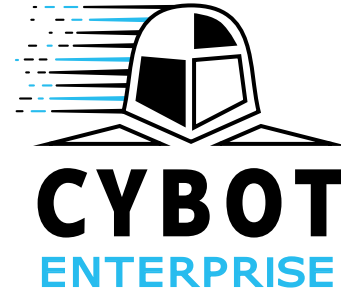

Start using the world's first **Automated Penetration Testing** solution that continuously identifies validated Attack Path Scenarios™ (APS) across multiple vectors and identify where remediation is needed the most.

Autonomous, machine-based penetration testing technology that scans network assets for **vulnerabilities**.

Maps and validates **Attack Path Scenarios™**, identifying all routes a hacker could take to reach your critical assets and business processes.

**Cybot Pro** acts like a human penetration tester but is continuous and scalable.

**CyBot Enterprise** manages several CyBot Pros for larger organizations with distributed networks.

**Attack Path Scenarios™** between business branches, each using a different CyBot machine are mapped out and validated.

**CyBot Enterprise** aggregates information from all CyBot Pros for in-depth **insight** into cyber threats to your business processes.

Infrastructure and Web scanning

Attack Path Scenarios™

Effective Remediation

# OPTIMIZED SECURITY

Embrace the power of  
**Automated Penetration Testing**  
for the next generation of  
Vulnerability Management

## BUSINESS PROCESS FOCUSED

Ensure business continuity by reducing the attack surface.

## AUTOMATED MANAGEMENT

Effectively protect your organization from threats and intelligently prioritize remediation.

## CONTINUOUS TESTING

Operates continuously to accommodate for network changes over time.

## PROACTIVE DEFENSE

CyBot provides actionable network security insights for remediation of vulnerabilities.

Certified for  
Penetration Testing

Leading the new generation of Vulnerability Management powered by patented, CREST approved, Automated Penetration Testing.
